Designing and Engineering Software, Security, and Privacy

Professional software development is more than just coding, and implementing solid security requires additional domain knowledge; data protection and privacy engineering add further challenges. We discuss how these disciplines differ and, importantly, what legal, compliance and business professionals need to know to work with their technical colleagues in these areas

Data Breach Management Across ASEAN

Hand-in-hand with the rise of cybersecurity threats has been an increase in the legal and regulatory response of governments seeking to mitigate the effect of such threats. One specific outcome has been the ever more widespread adoption of laws relating to data breach management and notification, particularly in relation to data breaches involving individuals' personal data.

In this session, our Drew Network Asia partners will discuss requirements and approaches to managing data breaches within ASEAN and beyond including topics such as notification requirements, obtaining and preserving forensic evidence and dealing with multiple regulators in a cross-border data breach scenario.

Cyber Insurance – Changing Resilience (The State of Play)

To provide an update on the state of cyber insurance as a product and a market – especially how cyber risk management is being addressed. In fact, it is crucial for modern organisations seeking to de-risk within the current cyber threat climate to reconsider how they are Measuring, Minimize/mitigating, and monitoring their cyber risk consistently.

In this panel, Howden will share their POV and experience in how they are disrupting cyber risk management and insurance to create better resilience.

2.30 pm

Beyond IT: Communicating in Cyber Crisis

With the increased visibility of cybersecurity crises across industries, scrutiny around organisation’s responses is only growing – from regulators, employees, supply chains, and media. It’s never been more important to have your finger on the pulse of the cybersecurity conversation as a core part of business – far before any crisis occurs.

In this panel, FTI will cover the latest landscape around cybersecurity & data privacy communications, understanding how communications integrate with your legal strategy, and best practices for managing a cyber incident in a constantly evolving digital world.

3.15 pm

Real World Tips and Tricks on How to Survive a Cyber Incident

Cyber incidents are increasing in frequency and sophistication, affecting businesses of all sizes. High-profile breaches have highlighted the severe financial, operational, and reputational consequences, along with regulatory fines for non-compliance. However, organizations can take proactive and cost-effective measures to minimize the impact of cyberattacks and data breaches.

In this panel, Ensign will present real-world cyber incidents and key learning points in an interactive format. Participants will engage in decision-making scenarios to understand the impact of their choices during a cyber incident. The session will provide practical insights into cost-effective strategies businesses can adopt to enhance cyber resilience, reduce downtime, and mitigate regulatory risks.
